

## OxPOS Standard of Care Diagnostic Report Generated from OUH Clinical Data Warehouse

Patient ID	OXPOS_005
Report Date	2023-02-06
Category	MDT
Status	final
Provider	Oxford University Hospitals
System	MDT
Report Id	fd4cfc9d-ac17-4921-9dcc-41740ac45ee7

Symptoms
Diagnosis: Soft Tissue Sarcoma: Myxoid liposarcoma / Left calf / 10.3cm / 24.Dec.2020 Treatment: Neoadjuvant radiotherapy [50Gy / 25#], completed 08.Mar.2021. Wide local excision / 15.Apr.2021. Treated in Oxford. He has now been diagnosed with a large abdominal mass. Our GI MDT have suggested a US guided biopsy- at the time of the discussion I am not sure the sarcoma history had been flagged. We have requested the biopsy. 02.08.22 CT large mass based on the mesentery developed very quickly to reach this size. There are lower attenuation areas within it. Needs a biopsy. Imaging from last year showed no evidence of abdominal mass. Original tumour in left lower leg excised. 05.09.22 Histology review - Most likely a metastatic myxoid liposarcoma. Could have a round cell component that was not present previously. Resection material showed complete response. 05.09.22 MDT - Needs a PET CT. Seeing in Oncology in Oxford face to face on Friday. 17.09.22 PET MDT 26.09.22 - Not well enough for chemotherapy last week. PET last week. May respond to chemotherapy in the first instance. Chemotherapy today. Complete chemotherapy and reassess
Pathological
None
Radiology
CT 28.01.23 - Follow up CAP/ Previous October. Chest remains clear. More than one site of disease. Largest in centre of abdomen decreased in size. Extended across to the left. Massively decreased in size of all 3 lesions. Small bowel loops intimately related.
