

## OxPOS Standard of Care Diagnostic Report Generated from OUH Clinical Data Warehouse

Patient ID	OXPOS_002
Report Date	2021-10-04
Category	MDT
Status	final
Provider	Oxford University Hospitals
System	MDT
Report Id	cc780628-85f6-4f60-889f-76b8e52a135f

Symptoms
HG spindle cell and pleomorphic sarcoma in thigh treated with Radiotherapy (17.11.20) and Surgery with clear margins (04.02.21). CT has been flagged to us due to [REDACTED] report. Enlarging left upper lobe nodule in a patient who appears to be a smoker. Either a metastasis or a primary lung cancer are possible. PET requested (on hold awaiting justification) 18.05.21 CT chest 02.06.21 PET - No local recurrence in thigh but solitary apical nodule which could be mets. 07.06.21 MDT - Seeing [REDACTED] today. Wait for Lung MDT outcome on 09.06.21. 09.06.21 Lung MDT - Amenable to percutaneous biopsy if primary vs metastasis changes management plan. LUL lobulated nodule only one growing. Multiple further tiny nodules- nil significant. For percutaneous biopsy of left apical growing nodule. 22.06.21 CTGBx - metastatic sarcoma. 05.07.21 Radiology review - Left apical lesion which is growing. Solitary. 05.07.21 MDT - [REDACTED] to refer to Cardiothoracics for surgery. 27.08.21 Surgery - Rigid Bronchoscopy + Left Vats With Extended Utility Port + Left Upper Lobe Wedge Metastectomy
Pathological
Metastatic HG spindle pleomorphic sarcoma fully excised.
Radiology
